EXP 5A
5: Insurance Claim Reports Suite — Report Types Use Case

Aim:

To design and build a complete suite of Reports in Zoho Creator for the existing "Insurance Claim Request Form" application, demonstrating the correct usage of all nine Report Types available in Zoho Creator — List View, Spreadsheet View, Kanban View, Calendar View, Map View, Timeline View, Pivot Table, Chart View, and Summary View — so that the claims team and branch management can view, analyze, and act on claim data from multiple perspectives.

Problem Statement:

The Insurance Claim Request Form captures rich claim data, but a single default list of records cannot serve every stakeholder's needs. The claims processing team needs a quick way to update investigation and settlement status in bulk, surveyors need to see where incidents are geographically clustered, branch managers need to see incident dates plotted for seasonal fraud-pattern analysis, and senior management needs summarized claim amounts and trend charts to plan reserves and staffing.

Design a complete set of Reports on top of the Claim_Request_Form in Zoho Creator, using every Report Type Zoho Creator provides, so that each stakeholder group has a purpose-built view suited to how they need to consume the claims data.

Scope of the Use Case:

- **Application Name:** Insurance Claim Request & Processing Management
- **Base Form:** Claim_Request_Form
- **Primary Users:** Claims Processing Team, Surveyors, Branch Managers, Senior Management
- **Deliverable:** Nine purpose-built Reports, one for each Zoho Creator Report Type
- **Objective:** Give every stakeholder a report format best suited to their specific decision-making need

Reports Used Overview:

Report Type	Report Name
List View	All_Claims_List
Spreadsheet View	Claims_Spreadsheet
Kanban View	Claim_Status_Kanban
Calendar View	Incident_Date_Calendar
Map View	Claimant_Location_Map
Timeline View	Claim_Activity_Timeline
Pivot Table	ClaimType_By_ClaimantType_Pivot
Chart View	ClaimType_Distribution_Chart
Summary View	ClaimType_Amount_Summary

Detailed Report Descriptions

1. All_Claims_List (List View)

- **Purpose:** Default landing report for the claims processing team, showing every claim in a flat, searchable list.
- **Features:** Search bar and column-level filters for Claim Type, Claimant Type, and Claim Status.

2. Claims_Spreadsheet (Spreadsheet View)

- **Purpose:** Used daily by the claims team to update investigation progress and settlement status in bulk.
- **Features:** Investigation Status, Surveyor Assigned, and Settlement Status are editable; other fields remain read-only.

3. Claim_Status_Kanban (Kanban View)

- **Purpose:** Visually tracks how claims move from Submitted to Settled or Rejected.
- **Features:** Claims are grouped by Status and displayed as draggable cards.

4. Incident_Date_Calendar (Calendar View)

- **Purpose:** Displays claims according to the date of incident to identify unusual clustering.
- **Features:** Monthly, weekly, and daily calendar views with incident counts.

5. Claimant_Location_Map (Map View)

- **Purpose:** Plots claimant residential locations to help surveyors plan site visits and identify regional clusters.
- **Features:** Geocoded residential-address pins grouped by claim type.

6. Claim_Activity_Timeline (Timeline View)

- **Purpose:** Enables management to monitor claim volume trends across weeks and months.
- **Features:** Chronological timeline based on Claim_Submitted_On.

7. ClaimType_By_ClaimantType_Pivot (Pivot Table)

- **Purpose:** Cross-tabulates Claim Type against Claimant Type to show claim counts.
- **Features:** Rows = Claim_Type; Columns = Claimant_Type; Values = Count of Claims.

8. ClaimType_Distribution_Chart (Chart View)

- **Purpose:** Visually compares claim volume across insurance categories.
- **Features:** Chart-based visualization with claim-type categories.

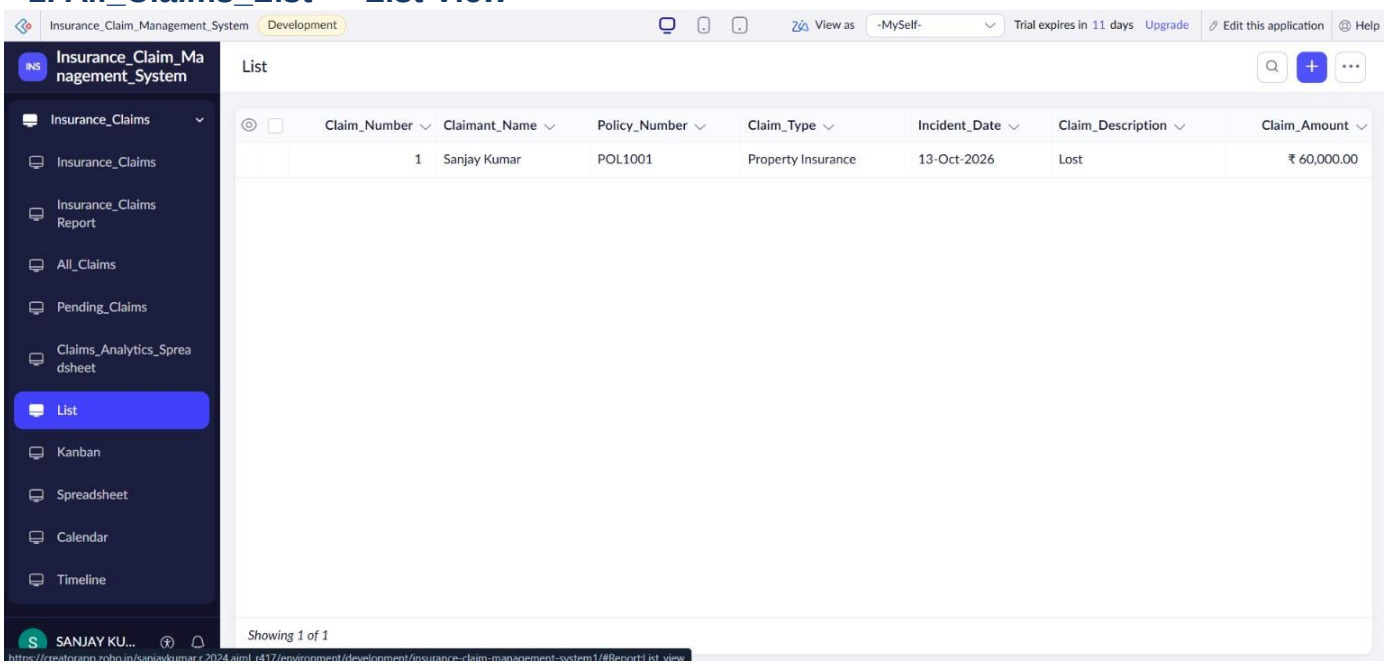

9. ClaimType_Amount_Summary (Summary View)

- **Purpose:** Groups and summarizes claims by claim type for financial exposure and reserve planning.
- **Features:** Count, sum, and average of Claim_Amount_Requested.

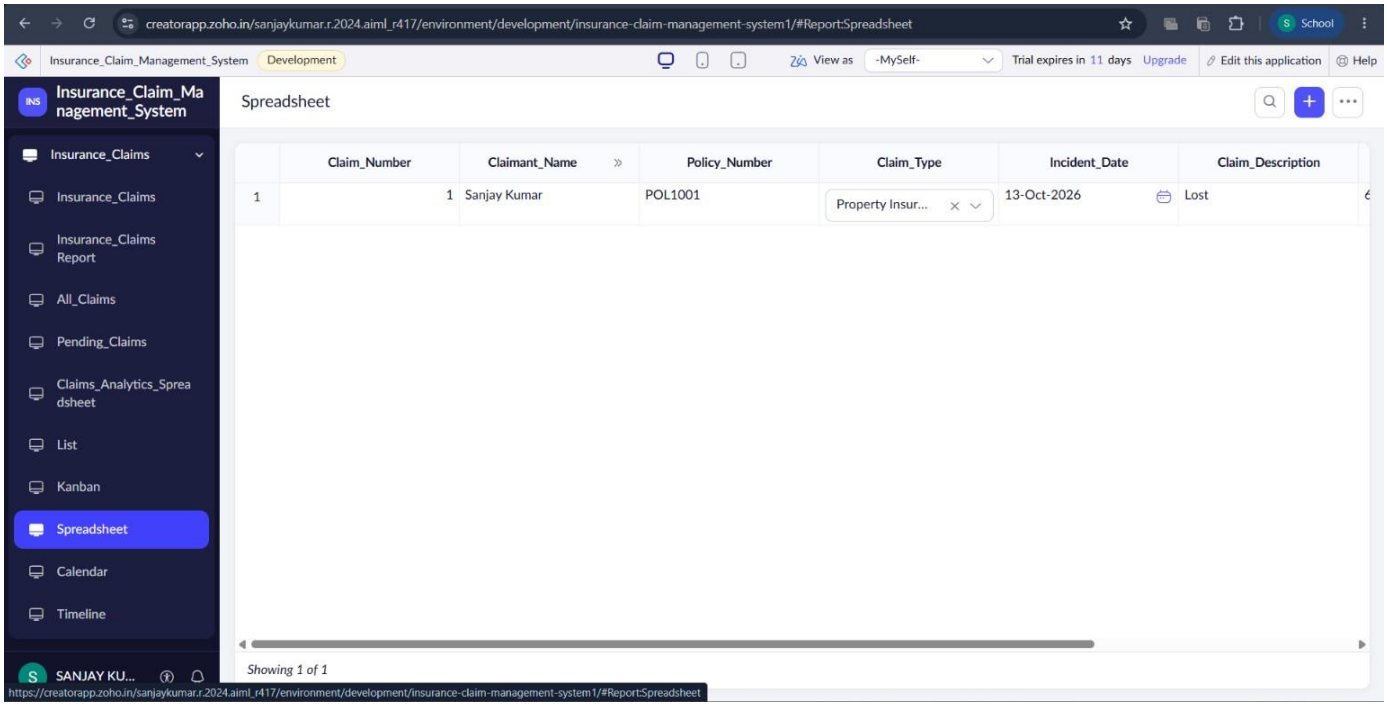

Configuration and Workflow:

The report suite uses sorting, grouping, editing permissions, geocoding, automatic refresh, INR currency formatting, and visual report configurations. Claimants submit claims through Claim_Request_Form; the claims team monitors the list and timeline, updates progress through the spreadsheet and Kanban views, surveyors use the map, fraud-analysis staff use the calendar, and management uses the pivot, chart, and summary views.

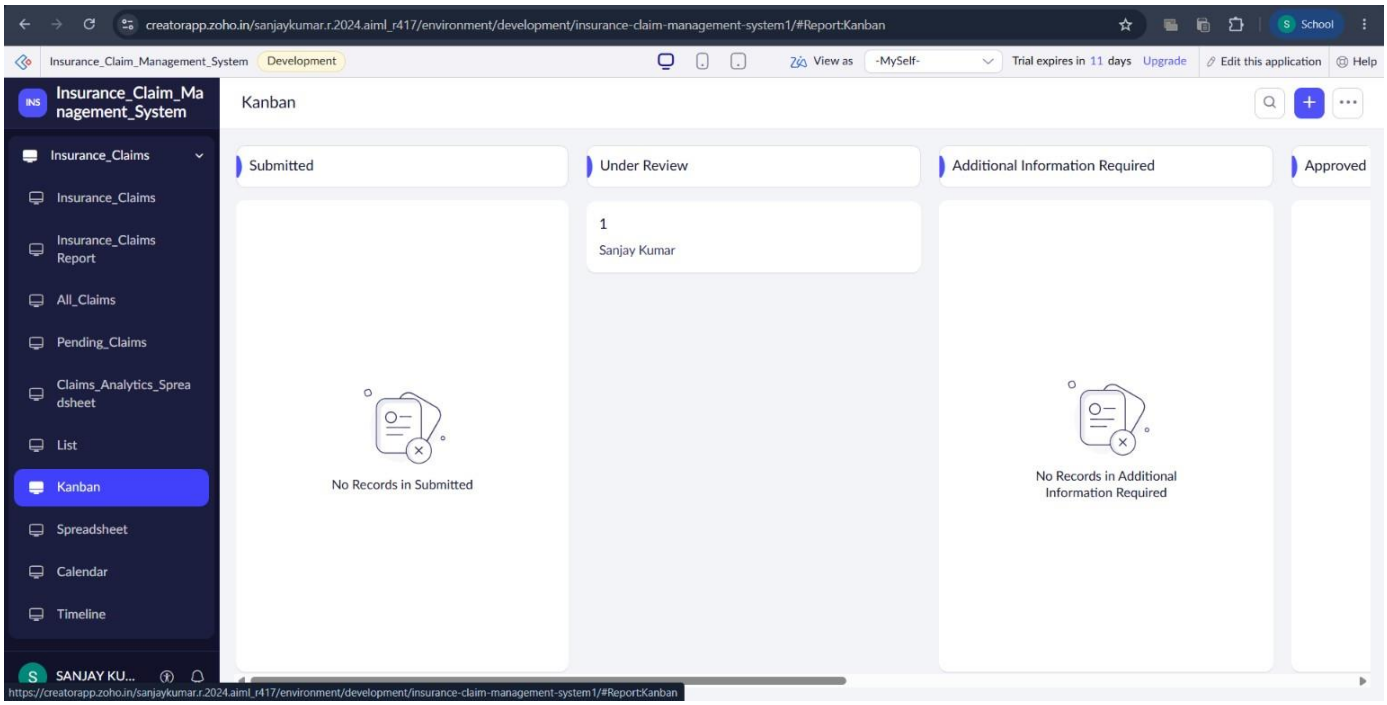

1. All_Claims_List — List View

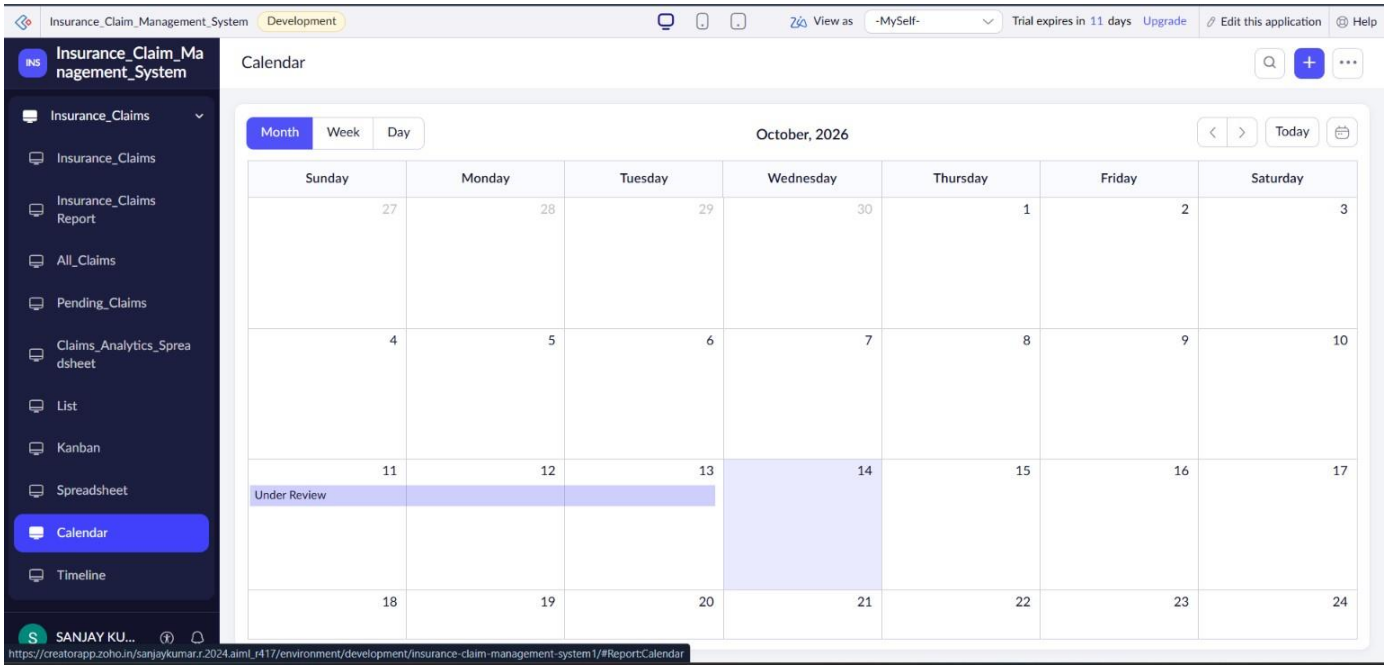

2. Claims_Spreadsheet — Spreadsheet View

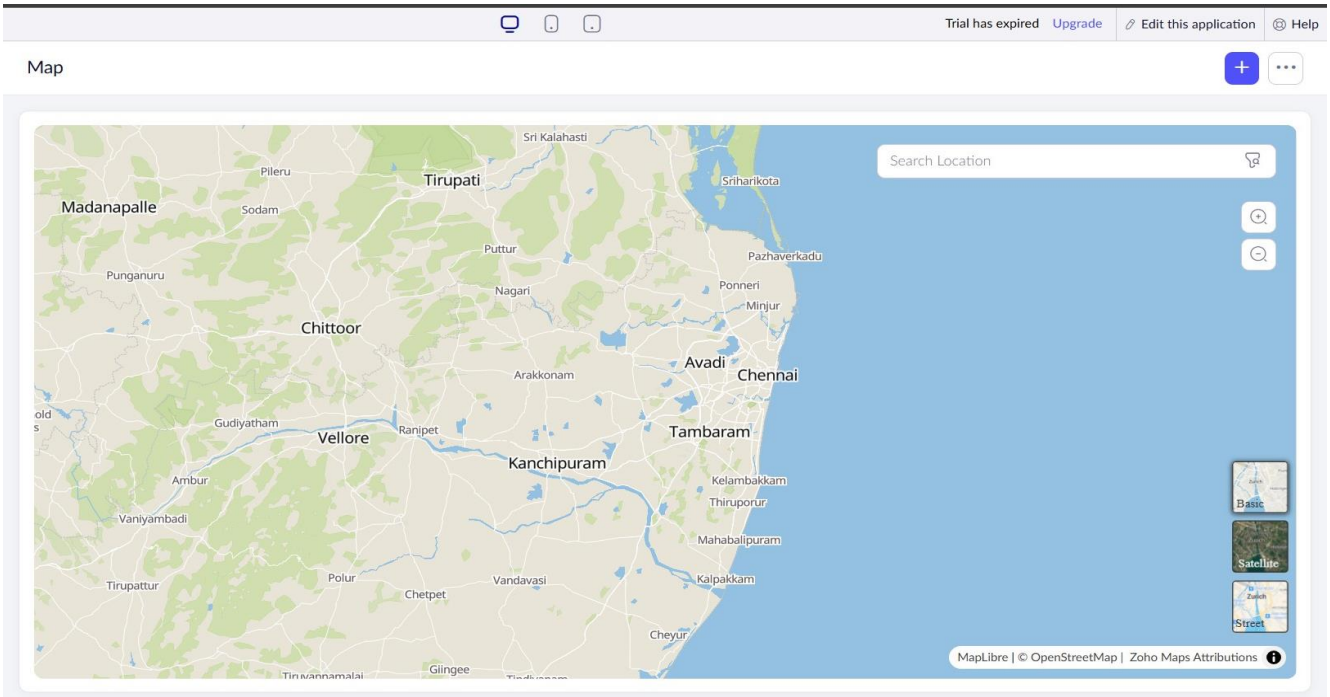

3. Claim_Status_Kanban — Kanban View

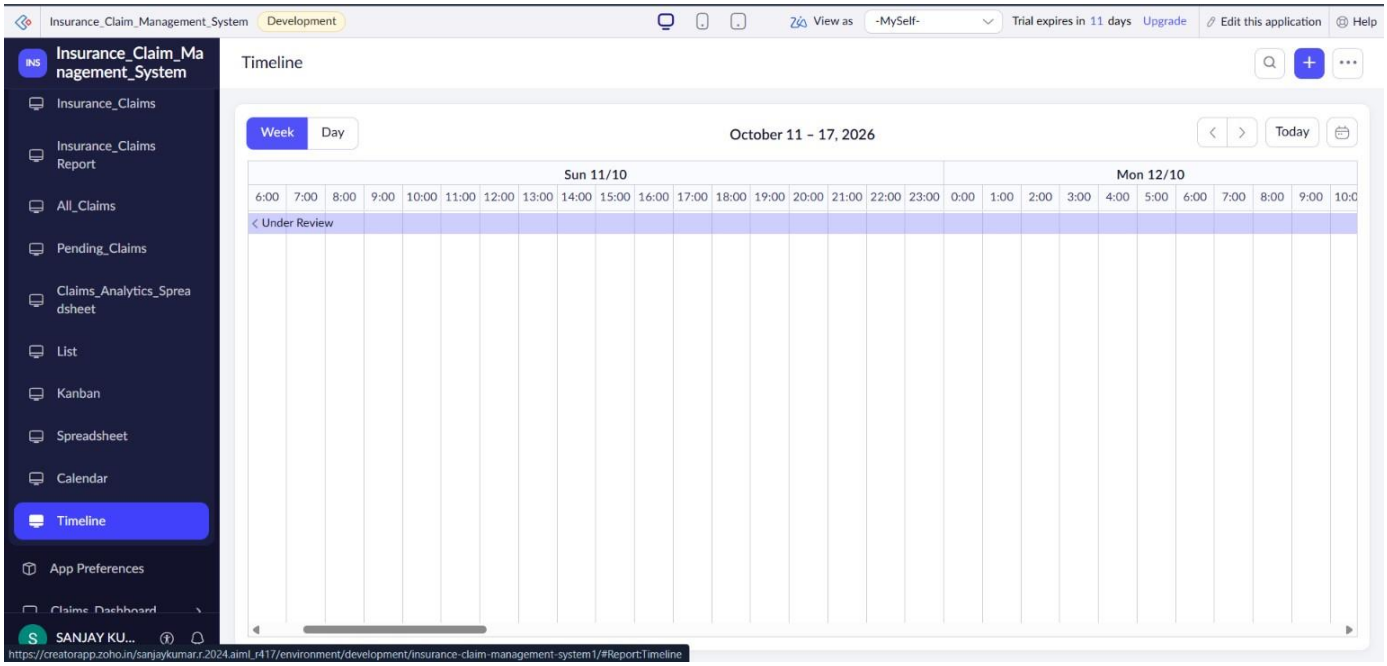

4. Incident_Date_Calendar — Calendar View

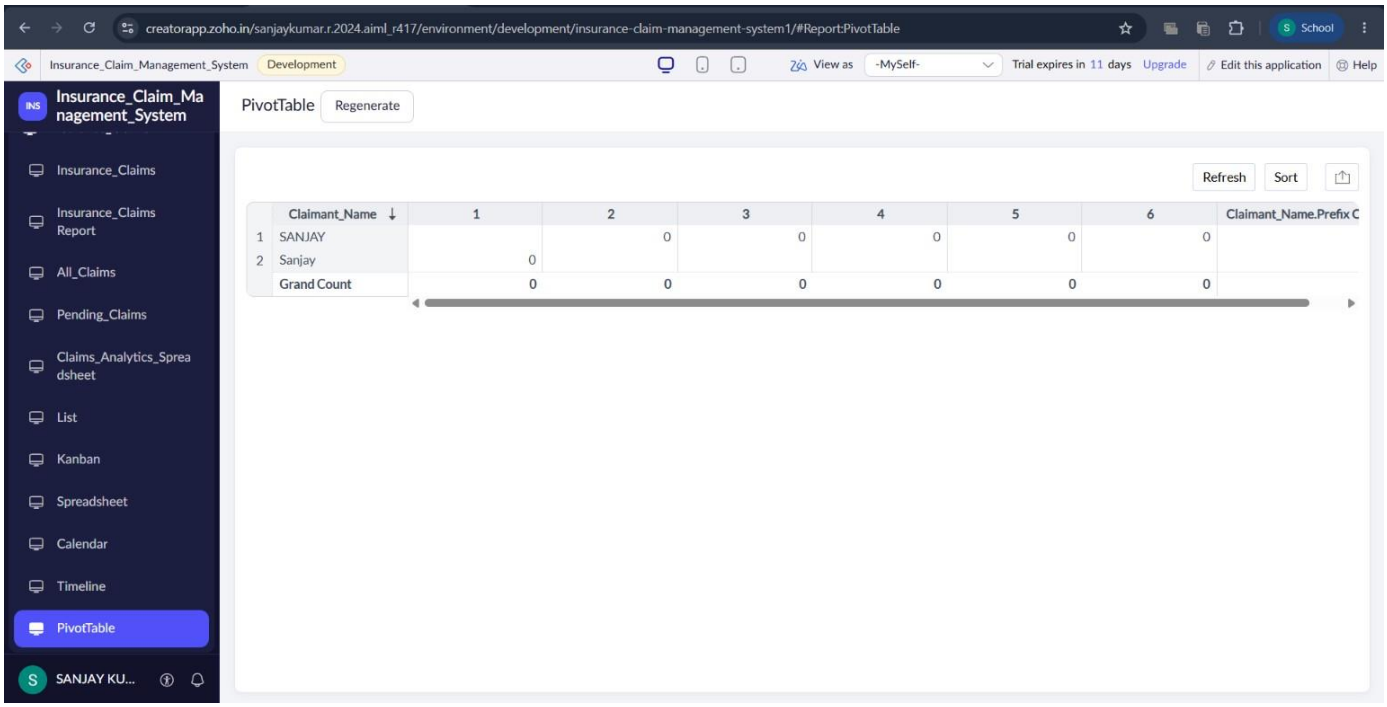

5. Claimant_Location_Map — Map View

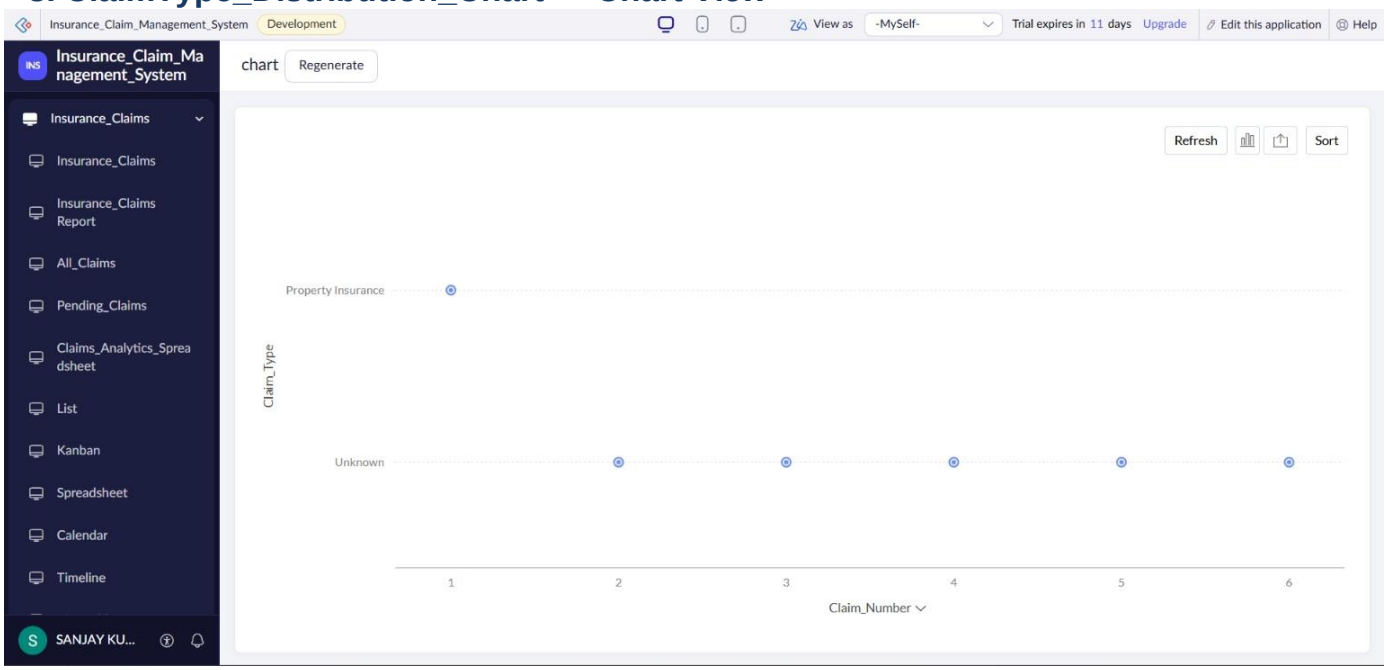

6. Claim_Activity_Timeline — Timeline View

7. ClaimType_By_ClaimantType_Pivot — Pivot Table

8. ClaimType_Distribution_Chart — Chart View

Result:

A complete suite of custom Zoho Creator reports for the **Insurance Claim Request & Processing Management** project has been successfully configured, verified, and documented. The implemented views provide list, spreadsheet, Kanban, calendar, map, timeline, pivot-table, and chart-based analysis of the claim records.

Note: The Summary View is specified in the assignment as ClaimType_Amount_Summary. A separate Summary View screenshot was not included in the supplied screenshots, so no screenshot has been fabricated.
