EXPERIMENT 8: USER MANAGEMENT & RBAC IN ZOHO CREATOR

Aim

To configure granular User Management and Role-Based Access Control (RBAC) within the Insurance Claim Management System in Zoho Creator to secure claim modules, restrict data visibility, and assign appropriate operational roles.

Workflow

Role-Based Access Control restricts application access according to a user's organizational responsibilities. The Insurance Claim Management System uses the following three user tiers:

Role Name	Assigned Permissions	Data Access Scope
Administrator	Full Create, Read, Update, Delete (CRUD)	All claim records and application settings
Branch Operations Manager	View, review, update status, and approve/reject assigned claims	Claims within assigned branch/department
Claims Employee	Create claims and view own submissions	Only self-created/submitted claims

Procedure

1. Access Developer Mode: Open the existing **Insurance Claim Management System** in Zoho Creator and select **Settings**.

2. Configure Users and Roles: Select **User Permissions**, then open the **Roles** tab. Click **Add Role** to create **Branch Operations Manager** and **Claims Employee**. Retain Administrator for authorized administrators.

3. Define Permissions: Open the **Permissions** tab and configure form, report, and component permissions according to each role's responsibilities. Give employees only the permissions required to submit and view their own claims.

4. Configure Record Visibility: Use available record visibility/data-sharing settings to restrict managers to claims in their assigned branch and employees to their own submissions. Use the **Insurance_Branches** field or owner/assignment criteria where supported.

5. Verify and Test: Test with representative Administrator, Branch Operations Manager, and Claims Employee accounts. Confirm each role can perform permitted actions and cannot access unrelated or unauthorized claim records.

Result

The Insurance Claim Management System is organized for role-based access control with Administrator, Branch Operations Manager, and Claims Employee roles. Verify the actual permissions and record visibility by testing each role in Zoho Creator.
